

Cancer Program

The treatment of cancer requires the use of several approaches in combination. All of these therapies work for some people, but none of them work for everyone. By combining them, we not only increase the probability of using one that works for you, but we also take advantage of the synergistic effect produced. These treatments are safe and effective, and are oriented towards getting you healthy. They have few to no side effects. They do, however, require the investment of time and effort. This process will also require that you make changes in your life in order to eliminate the factors that resulted in the growth of the cancer. I have listed below some of the therapies that could comprise a complete treatment program. In addition, we utilize the approach developed by Dr. Heinrich Kremer. Each persons program will be designed for them after a consultation and physical exam. You will be given information on each of these treatments on separate papers.

1. [Ozone IV](#) - twice a week
2. [UVB](#) - use 1-2 times a week at same time as Ozone
3. Vitamin C IV's as needed
4. Nutritional Therapy - hair analysis or symptom survey to determine which nutrients are needed
5. [Ionized Oxygen](#) - as often as possible
6. [Rife therapy](#) - as often as possible
7. [Neural Therapy/SRT](#) - the frequency will be determined at each session
8. [Energetic Treatment](#) - Emotional Acupressure and/or CHRIS Technique. The frequency is determined at each session
9. [Essential Oils](#) - do treatments 1-2 times a week
10. [Ozone Steam Detox](#): helps in a number of ways besides detox
11. [Hyperbaric Oxygen Therapy](#): critical to reverse the lack of oxygen in the tissues
12. Cellular Restoration Program: designed after initial consultation
13. [Colonics](#): excellent to help with detox
14. [Antioxidant IV](#): a critical therapy

Progress can be tracked with the usual modalities; MRI's, CT scans, etc. I also suggest the use of the AMAS for monitoring. This is a blood test that is very sensitive to the presence of cancer, and can detect it long before any other method. Once you are clear of cancer, I suggest the AMAS be done at 3, 6, 9, 12, 18, 24, 30 and 36 months. I then recommend that it be done every year from then on.
