

NATURAL CELLULAR DEFENSE

Natural Cellular Defense (NCD) is a product made of zeolite, a type of clinoptilolite. It is basically a mineral compound with a cage-like structure and a negative charge. This unique set of qualities enables it to have a wide variety of actions. These include:

It acts as an anti-oxidant, by trapping and excreting free radicals
Removes heavy metals and toxic chemicals
Reduces a wide variety of viruses
Traps and deactivates nitrosamines, which act to trigger cancer and Type II Diabetes
Has produced a 78% remission rate in one study of cancer patients
Acts to modulate and normalize immune system function
Balances the pH level of the body
Increases nutrient absorption

NCD is a safe and effective product that can be used long term. It has been used in Eastern medicine approaches for over 800 years. It is listed by the FDA as GRAS (generally recognized as safe). It can be used by children and adults on a regular basis.

The dosage guidelines are as follows:

- For general detox (the usual starting dose), take 10 drops 3 times a day for at least 6 weeks. A bottle will last for about 10 days at this dose (3 bottles per month).
- The maintenance dose is 3 drops 3 times a day. A bottle will last a full month at this dose.
- For more serious illnesses, acute problems and cancer, take 15 drops 3-4 times per day. The maximum dose is 60 drops per day.

Make sure that you drink enough water while taking NCD. Although detox reactions tend to be minor, good hydration will help. Also, do not take NCD if you are taking a prescription lithium product, Cisplatin, or Carboplatin (cancer drugs).

NCD is produced by a multi-level marketing company, Waiora. Like many of you, I am skeptical of most such products. However, when I tested a sample of NCD, it produced exceptionally good results in every single person that I checked. Given the results that it produces, the lack of side effects, and the quality of the product, I endorse it without reservation. If you would like to purchase this product at wholesale prices or become a distributor, please ask one of the staff to provide this information to you.
